Alton Holt owns a cattle ranch in Silsbee Texas. He and neighboring ranchers raise oats for cattle feed. During the winter of 2010 Alton planted and BioWashed 90 acres of oats. In 2011, Texas suffered the worst drought in Texas history. There was not enough rain for normal fertilization. The neighboring oat fields were too sparse to harvest. Alton enjoyed one of the best yields ever experienced. His oats tested at an astounding 46% protein compared to the average of 12 to 26%. The only difference was that Alton BioWashed his crop.

Bio-physicist Craig Jones credits the phenomenal results to the foliar absorption of moisture and nitrogen from the atmosphere.

Neighbor's Oats - Not BioWashed

Alton Holt's Oats - BioWashed
