

# Double the Efficacy of your Liquid Fertilizers?

Recently, an excited fertilizer producer visited me at 1<sup>st</sup> EnviroSafety, Inc.

He had tested and confirmed that **BioWash Soil Amendment** has immediately visible benefits on growth and yields. But his excitement was the result of adding a small amount of **BioWash** to his fertilizer.

**He was astounded by the results. Adding BioWash had tripled the normal results of his fertilizer!**

He demonstrated his test results by laying both hands on my desk. He said: “When I add my fertilizer to plants, it does this.” (He raised his left hand several inches.) “When I treat with **BioWash**, it does this.” (He raised his right hand several inches.) “**But when I combine the two, it does this!!! (Lifting both hands head high.)**”

He had observed immediate and visible growth improvements with only one (1) gallon of **BioWash Soil Amendment** per 500 gallons of his liquid nutrients.

## He theorized

1. **BioWash Soil Amend** is an exceptionally effective biostimulant. (It is NOT a fertilizer)
2. It dissolves fertilizer particles, reducing them into elemental ions. This makes them more readily absorbable via foliar, basal or systemic application.
3. By increasing ease of absorption, plants need less energy to “digest” the nutrients. The unused energy is converted to faster, hardier growth and increased yields.
4. He also reported that **BioWash** enhanced the effectiveness of his insecticides. He insisted that it will enhance any fertilizer, whether natural or synthetic.
5. BioWash Soil Amendment ingredients are documented as Genotoxicity Free (harmless to people and animals), Mutagen Free, carcinogen free and readily biodegradable.

But why accept the excitement of the competitive fertilizer producer?  
Why not do your own tests?

## Potential benefits to you:

Adding a small percentage of “**Bio Soil Amend**” to your products (1:500) may

1. Visibly improve their results, thus pleasing your consumers
2. Improving customer yields increases your sales and profits.
3. **The cost is insignificant** (\$0.09 to \$0.20 per gallon, depending on bulk)
4. **BioWash** is processed primarily from farm grown ingredients.

Applied alone, **Bio Soil Amend** stimulates plant absorption of available nutrients. Combined with your product, results could produce more sales and profits for you and your buyers.

Want a test sample? Call me. 239-283-1222.

Ted Tidwell, Formulator & CEO
